

**DBK Group** was founded 30 years ago in the field of pre-honed strip steel and doctor blades, for gravure, flexographic printing, printing industry of ceramics tiles and steel blades in general.

We recently have **restructured** the production part, inserting two new plants for the production: processing and pre-honing steel blades/doctor blades. The machines have been designed and built to our specifications by responding to the needs expressed by our customers in all these years. Our ambitious production project has come to fruition by including the part concerning the “cutting and packaging” customized.

From the production point of view we are now able **to meet** each specificity: both honing (bevel edge) that format (pre-cut).

D.B.K. S.r.l. **invested** in direct production of end seals used in chambered inking system, analyzing different neoprene compound, we are able to obtain the highest contained capacity, flexibility and contact surface perfect with cylinder.

The raw materials, another fundamental step to achieve the highest quality, are purchased directly from us in the best steel mills of Sweden, having gained ten-year collaboration with them and having tested all types of steel, we select for purchase only **the best materials**.

Completed our big investment in the production line, D.B.K. S.r.l started **to implement** the commercial network, with the aim to serve directly the customers in simply and efficient way.

To do this, **we have dedicated** space and resources to our warehouse, and for different types of steel for sizes available.

Today we can also confirm to be able to offer a prompt delivery for customized production.

We remain at your disposal for any further information.
